ILLEGAL CIGARETTES CRITERIA FOR VERIFICATION

Packs with at least one (1) of the following features:

1. Absence of Registered Importers
2. Unregistered Importers*
3. Absence of Registered Manufacturers
4. Unregistered Manufacturers*
5. Packs with counterfeit (fake) Malaysian tax stamp**
6. Packs without Malaysian tax stamp
7. Packs with non-Malaysian tax stamp
8. Unregistered Brand*
9. Non Compliance to Ministry of Health's Control of Tobacco Product Regulations (CTPR) 2004
 - I. Absence or Non Compliance of Pictorial Health Warning Requirements
 - I. Pack Size other than 20 sticks
 - II. Absence or Non Compliance of mandated labeling requirements

* Not registered with the Royal Malaysian Customs

** Verified by Lembah Sari Sdn Bhd (LSSB) – Government appointed sole vendor for tax stamp

TAX STAMP BREAKDOWN OF ILLEGAL CIGARETTES:

91% of illegal cigarettes are without tax stamps while remaining 9% are with fake tax stamps

Incidence (%)

APPENDIX: NIELSEN'S ICS RESEARCH OBJECTIVE & METHODOLOGY

RESEARCH OBJECTIVES

1 Identify the **incidence & trend** of illegal cigarettes in Malaysia & at State Level

2 Identify the **illegal brands** available in Malaysia and at State Level

3 Identify the level of **compliance vs. non-compliance** on cigarette packs

I. Security features (Tax Stamps)

II. Brands of Local Manufacturers and Importers registered with Royal Malaysian Customs

III. Mandated Labeling Requirements (under Control of Tobacco Product Regulations, Trade Description Act, Price Control & Anti Profiteering Act)

OVERVIEW OF STUDY FRAMEWORK

METHODOLOGY

- Method: **Litter collection of cigarette packs.**
- Frequency: **3 waves** in a year.
- Geographical coverage: Nationwide (Pen. M'sia and Sabah & Sarawak)
- Sample size: Nationwide **51,000 packs per wave** (Pen M'sia = A minimum of 3,000 packs per State, Sabah & Sarawak = 4,000 packs each)

PROCESS

SAMPLING ERROR

0.4% at national level and minimum 1.6% at state level

RELIABILITY

Packs
Collection

Compared with

Excise figures from:

- British American Tobacco (M) Berhad
- JT International Berhad
- Philip Morris (M) Sdn Bhd

A correlation of **0.99** consecutively since 1993 to 2017 were achieved indicating that the Litter Survey is reliable.

ICS RESEARCH METHODOLOGY AND DESIGN

- i. ICS Universe, Sample Size**
- ii. Sampling Coverage Of ICS and Fieldwork
- iii. Coding Processes
- iv. Data Processing
- v. Weighting The Survey Data

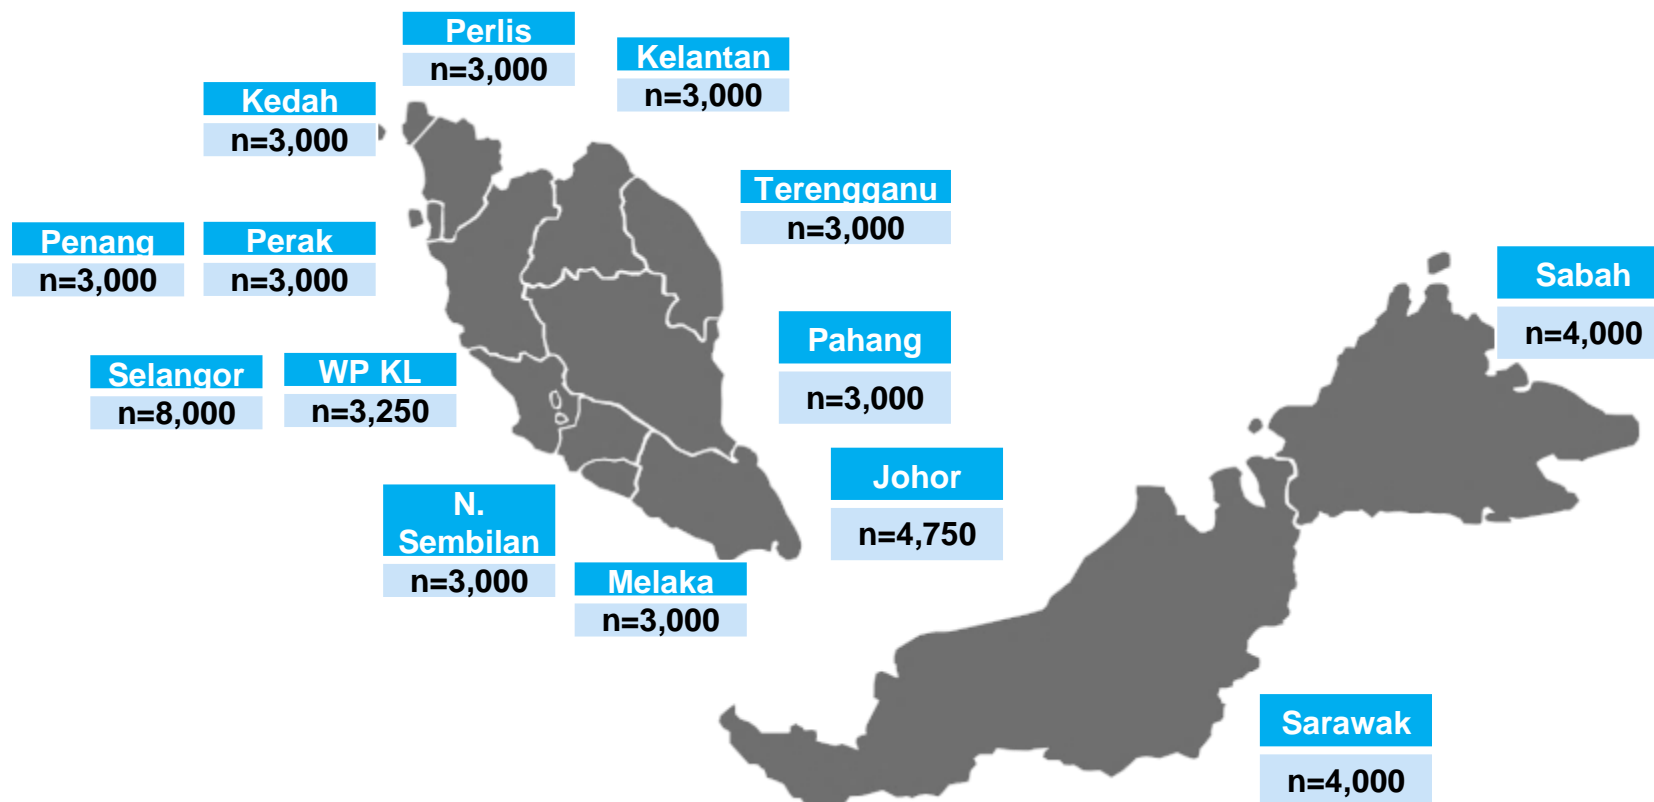

WHY SAMPLE SIZE OF 51,000 PACKS?

Sample Size (n=)	Sampling Error @ 95% Confidence
n=50	14.9%
n=100	9.9%
n=250	5.9%
n=500	4.1%
n=1,000	2.8%
n=2,000	2.0%
n=3,000	1.6%
n=4,000	1.4%
n=10,000	0.8%
n=20,000	0.6%
n=51,000	0.4%

- The data accuracy for a sample size is dependent on the sample size of a study; **Sampling error declines** as **sample size** for a study is **increased**
- To ensure minimal sampling error at **National level**, **sample size of n=51,000** was chosen
- At State level, a minimum sample size of n=3,000 was chosen to optimize data accuracy without impacting the efficiency of fieldwork turnaround time.
- **Any further increment** in sample size will have **minimal effect** in reducing sampling error

GEOGRAPHICAL COVERAGE & SAMPLE SIZE FOR EACH STATE

- State in Pen Malaysia, minimum sample size $n=3,000$
- State in East Malaysia, sample size $n=4,000$
- **These sample size are robust** taking into consideration geographical landscape, different cigarettes volume pattern and efficient turnaround of fieldwork

- Nationwide
- All 13 states in Peninsular and East Malaysia and KL Federal Territory
- Covers each state's **top 50% most populous** districts
- The sampling approach ensure **both Urban & Rural** coverage reflects data released by Malaysia Department of Statistic (Census 2010)

FLOW CHART FOR PRE-FIELDWORK AND FIELDWORK

Establish starting point of collection

Collect 25 packs from the street each week

Attach label to bag: Standard label with the following:

- *State*
- *Location collected*
- *Area type*
- *Date of collection*

Packs will then be delivered to Nielsen's Head Office at KL for coding

GUIDELINES FOR PACK COLLECTION

- All Packs collected from the collection points must be in decent condition. If not Lembah Sari Sdn. Bhd. will not be able to validate the authenticity of a pack if the packs are so badly damaged that certain key elements are missing
- Instruction to collectors is to collect pack in decent condition.
- No instruction on brand restriction is issued (hence, [rejection of packs in poor condition applies to all](#) brands)
- As such, collectors will have no preference on the packs being collected as long as it is in decent condition
- Remuneration for packs collected are standard across all pack type / brand

A ROBUST SOP FOR PACK VERIFICATION & CODING PROCESS

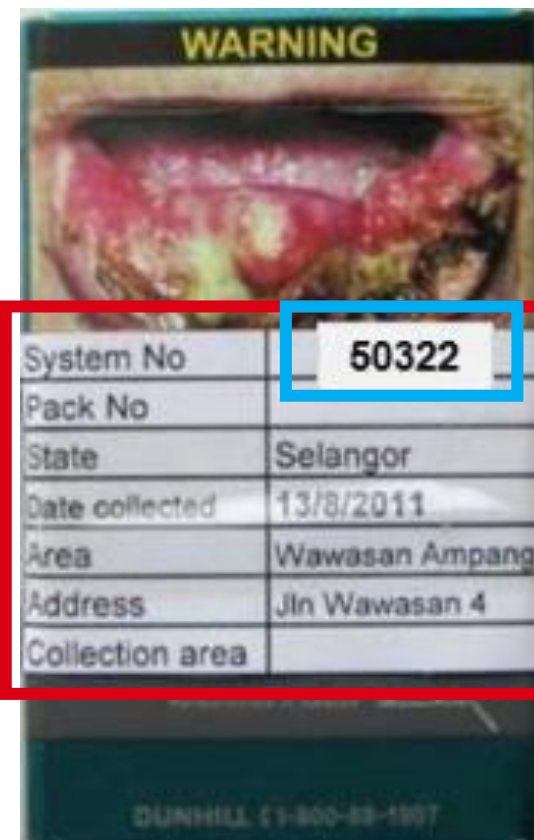

The following diagram illustrates the pack verification & coding process

CODING AND STORAGE PROCESS AT NIELSEN HQ

1. Packs which arrive at Nielsen HQ are assigned a unique pack ID number

A unique ID is assigned to each pack when it reach Nielsen HQ

Each cigarettes pack which arrive will have a sticker with details on when and where it is collected

Pack Sample

CODING AND STORAGE PROCESS AT NIELSEN HQ

2. Once the pack ID number is assigned, data entry process will begin. All information on the pack will be captured

3. When data entry is completed, the packs are sorted by brands and types

CODING AND STORAGE PROCESS AT NIELSEN HQ

4. Once the sorting is complete, the cigarettes packs are stored on shelves with labeling for easy retrieval when required

ILLEGAL CIGARETTES CRITERIA FOR VERIFICATION

Packs with at least one (1) of the following features:

1. Absence of Registered Importers
2. Unregistered Importers*
3. Absence of Registered Manufacturers
4. Unregistered Manufacturers*
5. Packs with counterfeit (fake) Malaysian tax stamp**
6. Packs without Malaysian tax stamp
7. Packs with non-Malaysian tax stamp
8. Unregistered Brand*
9. Non Compliance to Ministry of Health's Control of Tobacco Product Regulations (CTPR) 2004
 - I. Absence or Non Compliance of Pictorial Health Warning Requirements
 - I. Pack Size other than 20 sticks
 - II. Absence or Non Compliance of mandated labeling requirements

* Not registered with the Royal Malaysian Customs

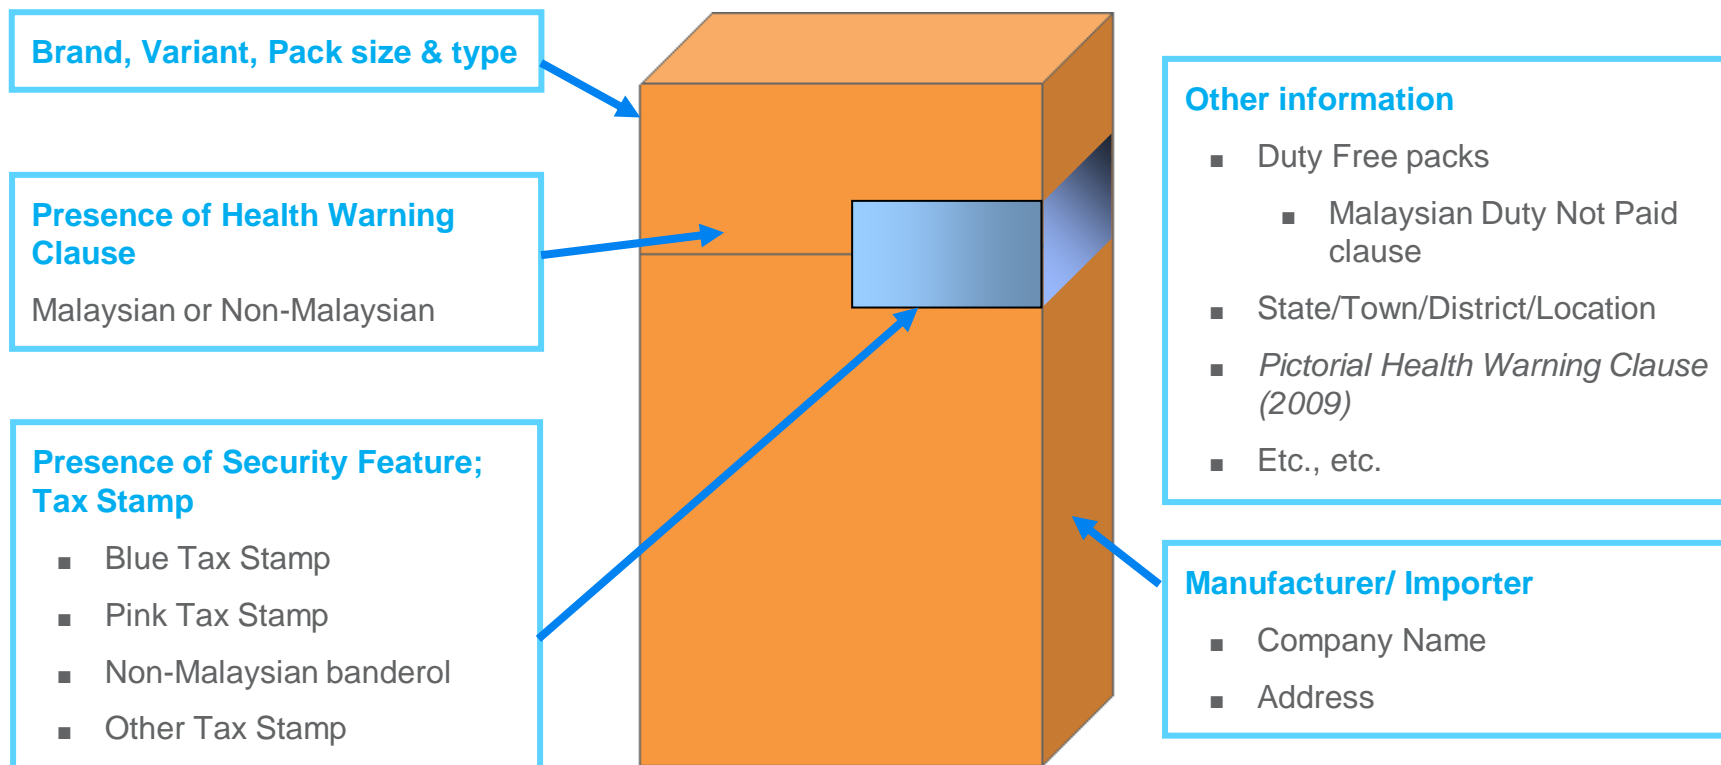

** Verified by Lembah Sari Sdn Bhd (LSSB) – Government appointed sole vendor for tax stamp

REGULATIONS SET BY THE MALAYSIA GOVERNMENT

- All locally manufactured cigarettes and imported cigarettes are required to meet the following criteria:
 - **Registered brand** with Customs
 - **Registered manufacturer** with Customs
 - **Registered importer** with Customs (if it is an imported pack)
 - **Malaysian labeling requirements** i.e. pictorial health warning clause, textual health warning clause, “no sales to under 18” clause, manufacturing date, name and address on manufacturer/importer
 - **Pack size** of not less than 20 sticks
- Additional security features for imported / manufactured packs for **domestic** consumption:
 - Blue tax stamp
- Additional security features for imported / manufactured packs for **duty free** consumption:
 - Pink tax stamp

VISIBLE ELEMENTS CAPTURED IN ICS

The following visible elements is **checked & coded / captured** for *each* of the collected packs by Nielsen Malaysia

Information on registered brands, registered manufacturers/ Importers is provided by CMTM

VERIFICATION OF SECURITY TAX STAMP

- **Tax Stamps** are verified by Lembah Sari using the special reader/tool
- Verification outcome: **sign off by Lembah Sari & Nielsen** as witness

VERIFICATION OF SECURITY TAX STAMP

Blue Tax Stamp
(Domestic Market)

OR

Pink Tax Stamp
(Duty Free Market)

VERIFICATION OF NON-VISIBLE ELEMENTS

- Only applicable to CMTM members' brands
- **Verification** by the respective member companies' **technical experts**
- Pack **IDs of identified Counterfeit packs** are given to Nielsen Malaysia

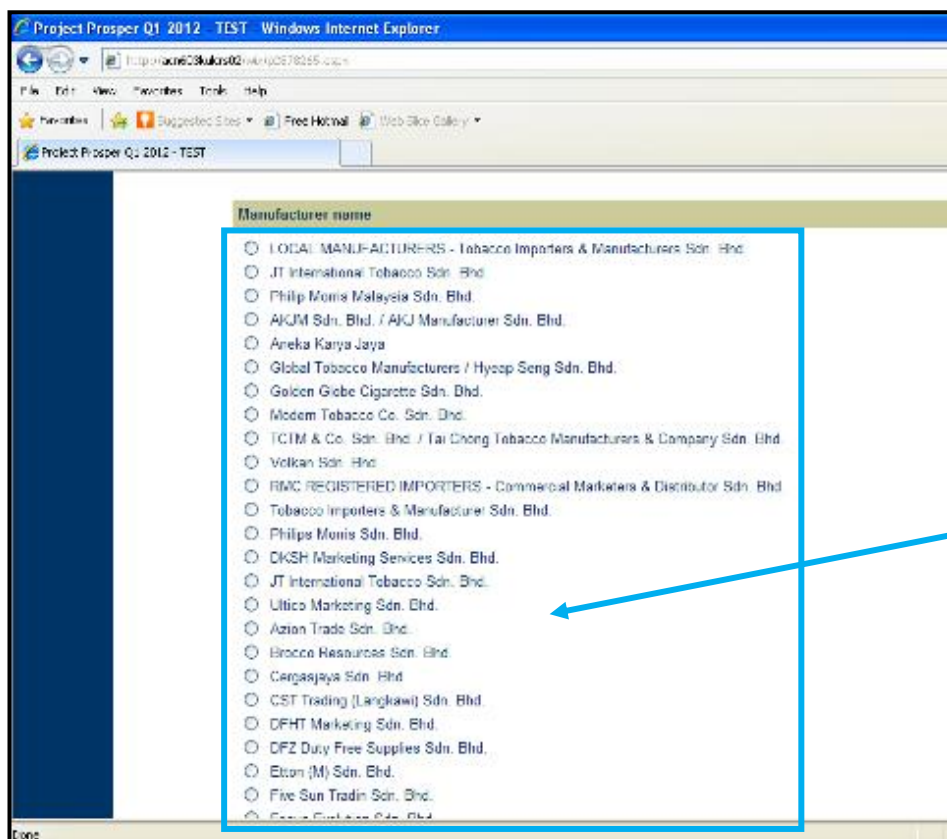

ICS RESEARCH METHODOLOGY AND DESIGN

- i. ICS Universe, Sample Size
- ii. Sampling Coverage Of ICS and Fieldwork
- iii. Coding Processes
- iv. Data Processing**
- v. Weighting The Survey Data

DATA PROCESSING (DATA CLEANING & MERGING)

- Software program to ensure data accuracy
- Logic checks on brand and manufacturers
- Security feature verification results merged into data file

Control of Response List by Researchers

- Data entry can only input data as per the response list provided
- Any new information to be added to the response list is **subject to Research Team approval**
- Research Team will **review and validate the new details** before adding in any new response into the system

10% of data entered into the database will be cross-check by a QC personnel to ensure data accuracy and coders are capturing the data correctly

QC personnel will randomly select 10% of packs which has been keyed into the system, cross-compare to ensure pack features is similar to what has been recorded in the system and rectify the data

Besides completing a 10% physical QC check, the database is reviewed to check for data discrepancy against known facts

- E.g. Dunhill belongs to BAT M'sia ,
- Legal packs comes only in pack size of 20s

If any data discrepancies are detected, the affected pack will be extracted and a physical validation process will be undergone

ICS RESEARCH METHODOLOGY AND DESIGN

- i. ICS Universe, Sample Size
- ii. Sampling Coverage Of ICS and Fieldwork
- iii. Coding Processes
- iv. Data Processing
- v. **Weighting The Survey Data**

Why apply Weighting to Survey Data?

- A weighting process is used to determine the total estimated cigarettes volume pattern of an individual state
- If weighting is not done, then:
 - **All states** in Peninsular are assumed to have **equal volumes** of total cigarettes volume
 - Perlis with a smaller population will be **over represented** and Selangor, with a bigger population will be **under represented**
 - Sabah and Sarawak, combined would represent about 16% (8,000 of 51,000 packs) of total cigarettes volume in Malaysia, which in reality is less than 10%.

HOW DOES NIELSEN WEIGHT THE DATA?

Step 1: Establish the Estimated Legal Industry Volume

- The **estimated legal industry volume** is established based on the following information:
 - In-market sales** as provided independently by British American Tobacco Malaysia (BATM), Philip Morris Malaysia (PMM) and Japan Tobacco International (JTI)
 - Local manufacturers' **volume** from **Nielsen's Retail Audit**
 - Malaysian Duty Free** volume from Illicit Cigarettes Study (**ICS**)

	2018, Oct-Dec	
	('000 sticks)	
CMTM Member Companies (BATM, PMM, JTI)	1,769,280	Derive from actual in-market sales as provided by CMTM member companies
Other Local manufacturers	139,358	Retail Audit volume is used as substitute since actual data is not available
Malaysian Duty Free	180,856	ICS volume estimation is used as substitute since actual data is not available
Total Legal Cigarettes Sales	2,089,494	

Unit of measurement : thousand sticks

HOW DOES NIELSEN WEIGHT THE DATA?

Step 2: Establish the Legal Industry Volume contribution by State

- Using Nielsen Retail Audit as a guideline, **establish each states' legal volume contribution** towards the national volume of 1,999,798 million sticks

	NIELSEN RETAIL AUDIT	STATE'S LEGAL VOLUME CONTRIBUTION
PERLIS	7,989	0.5%
KEDAH	80,775	4.7%
PENANG	146,705	8.5%
PERAK	105,160	6.1%

WP KL	213,983	12.4%
N.SEMBILAN	73,613	4.3%
MELAKA	83,011	4.8%
JOHOR	312,208	18.1%
PAHANG	90,784	5.3%

NATIONAL	1,721,940	

Step 2a. (Using Retail Audit)

State Legal Volume Contribution = $\frac{\text{State's Retail Audit Volume}}{\text{National Volume}}$
 (e.g. $439,593 / 1,721,940 = 25.5\%$)

	NIELSEN RETAIL AUDIT	STATE'S LEGAL VOLUME CONTRIBUTION	PROJECTED/ ESTIMATED STATE LEGAL VOLUME
SELANGOR	439,593	25.5%	536,426
NATIONAL	1,721,940		2,089,494

Step 2b.

Projected States Legal Volume = State Legal Volume Contribution X National Legal Volume
 (derived from Retail Audit) (obtained from Step 1)

(e.g. $25.5\% \times 2,089,494 = 533,426$)

HOW DOES NIELSEN WEIGHT THE DATA?

Step 3: Establish the Incidence for Legal / Illegal Cigarettes

- Convert the data from “**packs collected** “ to “**sticks**” (based on pack size)
- The **study’s unit of measurement** is based on consumption in **sticks**
 - Though CTPR prohibits the sales of cigarettes below the pack sizes of 20 sticks, **illegal cigarettes** (primarily for illegal kretek) could still be found **in pack sizes below 20 sticks**
 - The **calculation based on number of packs collected** will **create a false inflation** on illegal volume due to the presence of packs sizes below 20 sticks

State	Total packs collected (Oct'16 – Dec'16)	Number of legal packs collected	(Unweighted) Volume of legal packs collected	Number of illegal packs collected	(Unweighted) Volume of illegal packs collected	Total volume (Legal + Illegal)	Incidence of legal cigarettes	Incidence of illegal cigarettes
			A		B	C = A + B	D = A / C	E = B / C
SELANGOR	8,000	3,036	60,720	4,964	89,400	150,120	40.4%	59.6%

Step 3a.
Sum up the number of sticks per pack for all legal packs collected to establish the estimated legal volume in sticks

Step 3b.
Repeat Step 3a to establish the estimated illegal volume in sticks

Step 3c.
Sum up the total consumption for both legal and illegal to establish The estimated total cigarette volume at state level

Step 3d.
Calculate the ratio of estimated legal vs. illegal volume

Step 3: Incidence for Legal / Illegal Cigarettes Key Output

- Establish the level of legal vs. illegal cigarettes ratio in each respective state

State	Total packs collected (Oct'16 – Dec'16)	Number of legal packs collected	(Unweighted) Volume of legal packs collected	Number of illegal packs collected	(Unweighted) Volume of illegal packs collected	Total volume (Legal + Illegal)	Incidence of legal cigarettes	Incidence of illegal cigarettes

HOW DOES NIELSEN WEIGHT THE DATA?

Step 4: Project Total Market Volume

- Once each states' estimated legal volume and legal incidence have been established, the numbers will be used to project total industry volume for each state

	STATE LEGAL VOLUME	LEGAL INCIDENCE	TOTAL MARKET VOLUME	STATE ILLEGAL VOLUME
	A	B	$C = A / B$	$D = C - A$
SELANGOR	533,426	40.4%	1,320,361	786,935

Step 4a.

Based on the incidence for legal cigarettes of 47.2% in Perlis, project the total volume for the state
(e.g. 533,426 divide by 40.4% = 1,320,361)

Step 4b.

Illegal volume is established by subtracting the projected total state's volume with the legal volume
(e.g. 1,320,361 – 533,426 = 789,935)

HOW DOES NIELSEN WEIGHT THE DATA?

Step 4: Key Output - Illegal Cigarettes Incidence @ National level

- Repeat the same process in Step 4 for all States

	STATE LEGAL VOLUME	LEGAL INCIDENCE	TOTAL MARKET VOLUME	STATE ILLEGAL VOLUME
